

## Cloud Software Developer

### Job Functions

- Work closely with product engineering to develop complete, scalable cloud based solutions
- Implement high performance content delivery and distribution cloud systems
- Design systems to process large continuous data streams from millions of endpoints
- Deliver five-nine uptime for critical services
- What we're looking for:
- Someone who is excited to be on the front line for getting customer feedback on the algorithms and services you run

### Experience and skills:

- Familiarity with server-less cloud offerings and architectures
- Experience with Amazon Web Services (AWS) including DynamoDB, RDX, IoT Core, Lambda, API Gateway and Auto Scaling and/or Microsoft Azure and equivalent.
- Practical understanding of cryptography & cloud-based service models
- Comfort or experience with hybrid systems of local and cloud-based AI
